BUILD YOUR BUSINESS

with Xicall Messenger and SMS Enablement

Studies show that most people would **rather text than talk**, but if you're like most small businesses, you're just not set up to effectively manage this important communications channel.

That can all be fixed in just minutes with **Xicall Messenger and SMS/MMS enablement of your business phone number**. You don't have to change phone carriers or install any equipment.

You can add **"call or text"** to your business cards, signage, web sites, and other marketing material to let your customers know that they now have **an additional way to reach you**. Customers can also send you pictures to convey information that might be hard to describe in words.
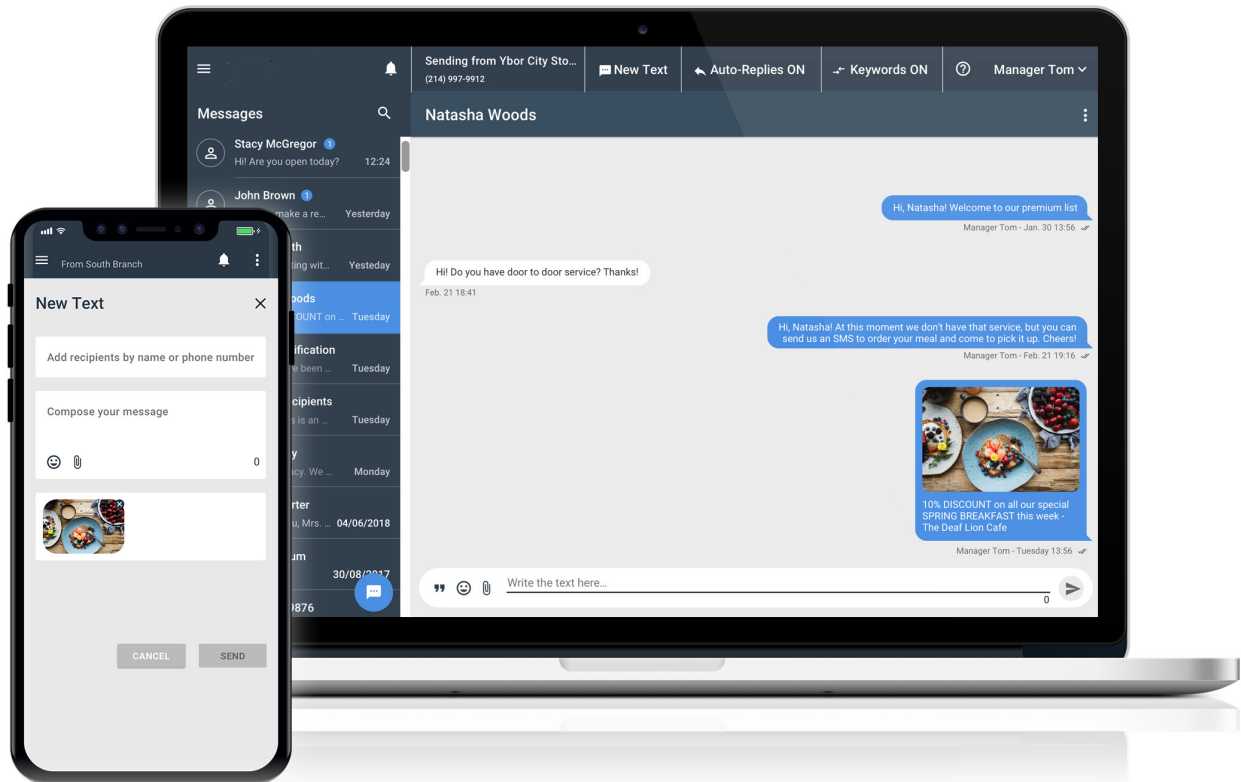

You can configure the system to forward the text messages to one person or a group, and they can receive the text messages on their **mobile phones or from any PC, Laptop, or Tablet**.

Anyone who receives a message can reply.

You can also configure the system to recognize **keywords** and **automatically reply** commonly used responses based on those keywords and time of day routing. Driving Directions, Hours of Operation, Menus, Sale Coupons, Special Events ... all these things can be **automated responses triggered by keywords that you choose**. Replies can be text or pictures.

Make text messages as easy as sending or receiving an email with Xicall Messenger
